5	Live Well South Tees Health and Wellbeing Board - Annual Report 2018/19
6	Health and Wellbeing Executive Chair's report
7	Forward Work Programme

Cumbria and North East Integrated Care System

The long term ambition for the people of the North East and North Cumbria (NENC) is ***to transform health outcomes and help them to live longer, healthier and wealthier lives.***

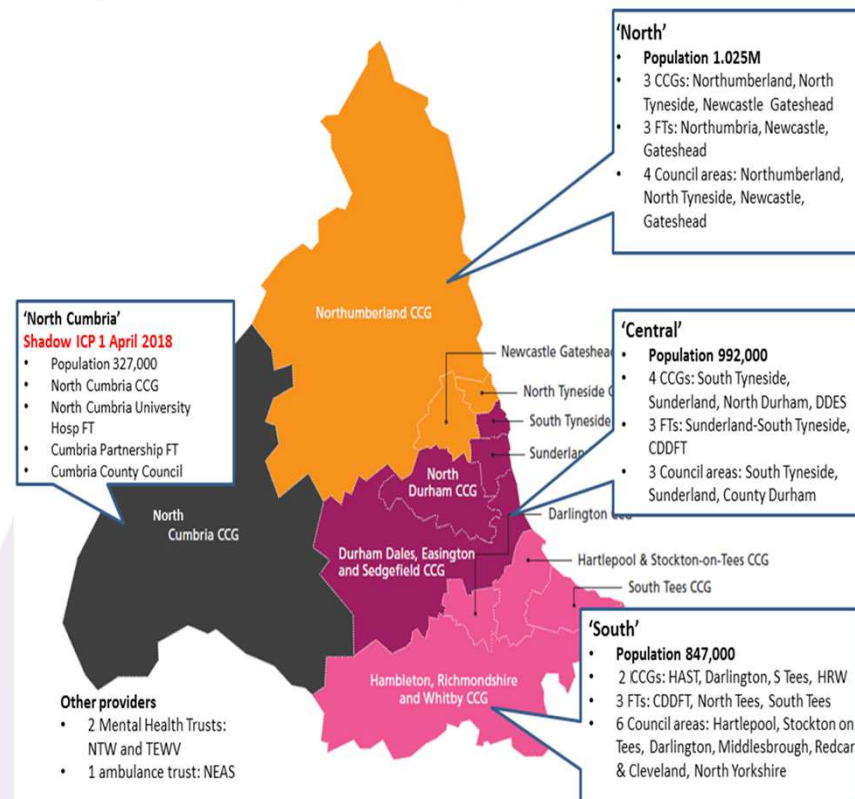

‘North East and North Cumbria, ICS Vision, Strategy and Framework for System Working’ details the vision and longer term priorities as well as the mechanism for system working.

A draft NENC System Operating Plan (aggregated plan) has been developed to provide a supportive narrative to articulate how NENC ICS will deliver the requirements of the NHS Operational Planning and Contracting Guidance.

It has been built up from Place level discussion, where there is active engagement with local government and community and voluntary sector partners, through to ICP level plans and active collaboration with NENC wide priority programmes including Health Education England. These 2019/20 planning submissions align with, and support delivery of, NENC’s longer term priorities.

There are four ICPs within the NENC ICS. The map illustrates the formation of the four ICPs.

Integrated Care Partnerships

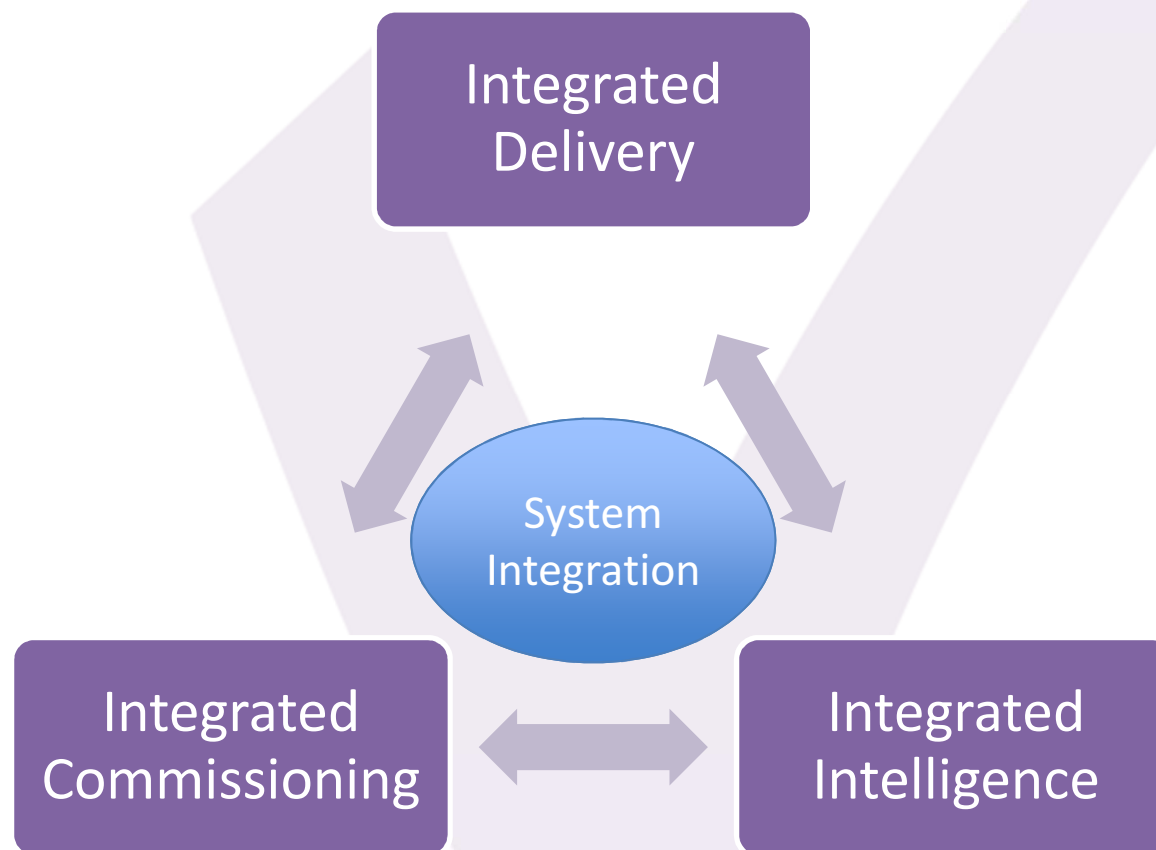

Opportunities for integrated delivery, commissioning and intelligence

The Live Well South Tees H&WBB agreed

- a collective willingness to work together that ensures there is a difference to people's lives, is place based to impact on our communities and raise expectations of local people
- The development of a Health and Social Care System Integration Programme

Health and Social Care System Integration Programme

Delivery – Place based Model of Care

- We will implement a model of integrated and joined up care across health and social care
- We will wrap teams of community based services around populations identified through GP networks
- We will support more people to remain in their own homes and manage their own conditions
- We will ensure that information is joined up and supports patient interactions
- We will simplify the way that professionals and members of the public access services through the implementation of an integrated single point of access

Information - Population Health Management

Our vision

- To take a population health approach to understand the health and wellbeing of our population - health needs, resource utilisation - and use the intelligence to drive improvements.
- We will link health and care records of about 280,000 people who live in South Tees at an individual, but de-personalised level to provide a holistic view of service need and resource utilisation that will inform decision making for commissioning and service re-configuration.

Information - Population Health Management

Progress to date

- Programme governance and scope Project lead identified
- Programme board established
- Business case is being developed
- Proposal has been identified by the Board to use a pathfinder project to test to development of the local infrastructure

Next Steps

- Establish and agree the key tasks for the subgroups of the programme board
- Implement a pathfinder project to test the development of the infrastructure for an integrated dataset: and
- Finalise the business case for approval

Healthwatch South Tees

- There is a local Healthwatch in every area of England.
- Independent champion for people using local health and social care services
- Gathers people's views on, and experiences of, the health and social care system
- Enter and view local services to speak to patients and service users, and observe services being delivered
