

Appendix 1

Economic Background – 2025/26 Financial Year (first six months)

The first quarter was dominated by the fallout from the US trade tariffs and their impact on equity and bond markets. The second quarter, still rife with uncertainty, saw equity markets making gains and a divergence in US and UK government bond yields, which had been moving relatively closely together.

From late June, amid a UK backdrop of economic uncertainty, concerns around the government's fiscal position and speculation around the autumn Budget, yields on medium- and longer-term gilts pushed higher, including the 30-year which hit its highest level for almost 30 years.

UK headline annual consumer price inflation (CPI) increased over the period, rising from 2.6% in March to 3.8% in August, still well above the Bank of England's 2% target. Core inflation also rose, from 3.4% to 3.6% over the same period, albeit the August reading was down 0.2% from 3.8% the previous month. Services inflation also fell from July to August, to 4.7% from 5.0%.

The UK economy expanded by 0.7% in the first quarter of the calendar year and by 0.3% in the second quarter. In the final version of the Q2 2025 Gross Domestic Product (GDP) report, annual growth was revised upwards to 1.4% y/y. However, monthly figures showed zero growth in July, in line with expectations, indicating a sluggish start to Q3.

Labour market data continued to soften throughout the period, with the unemployment rate rising and earnings growth easing, but probably not to an extent that would make the more hawkish Monetary Policy Committee (MPC) members comfortable with further rate cuts. In addition, the employment rate rose while the economic inactivity rate and number of vacancies fell.

The Bank of England (BoE)'s MPC cut Bank Rate from 4.5% to 4.25% in May and to 4.0% in August after an unprecedented second round of voting. The final 5-4 vote was for a 25bps cut, with the minority wanting no change. In September, seven MPC members voted to hold rates while two preferred a 25bps cut. The Committee's views still differ on whether the upside risks from inflation expectations and wage setting outweigh downside risks from weaker demand and growth.

The August BoE Monetary Policy Report highlighted that after peaking in Q3 2025, inflation is projected to fall back to target by mid-2027, helped by increasing spare capacity in the economy and the ongoing effects from past tighter policy rates. GDP is expected to remain weak in the near-term, whilst over the medium-term outlook will be influenced by domestic and global developments.

Arlingclose, the Council's treasury management adviser, maintained its central view that Bank Rate would be cut further as the BoE focused on weak GDP growth more than higher inflation. One more cut is currently expected during 2025/26, taking Bank Rate to 3.75%. The risks to the forecast are balanced in the near-term but weighted to the downside further out as weak consumer sentiment and business confidence and investment continue to

Appendix 1

constrain growth. There is also considerable uncertainty around the autumn Budget and the impact this will have on the outlook.

Against a backdrop of uncertain US trade policy and pressure from President Trump, the US Federal Reserve held interest rates steady for most of the period, before cutting the Fed Funds Rate to 4.00%-4.25% in September. Fed policymakers also published their new economic projections at the same time. These pointed to a 0.50% lower Fed Funds Rate by the end of 2025 and 0.25% lower in 2026, alongside GDP growth of 1.6% in 2025, inflation of 3%, and an unemployment rate of 4.5%.

The European Central Bank (ECB) cut rates in June, reducing its main refinancing rate from 2.25% to 2.0%, before keeping it on hold through to the end of the period. New ECB projections predicted inflation averaging 2.1% in 2025, before falling below target in 2026, alongside improving GDP growth, for which the risks are deemed more balanced and the disinflationary process over.

Financial markets: After the sharp declines seen early in the period, sentiment in financial markets improved, but risky assets have generally remained volatile. Early in the period bond yields fell, but ongoing uncertainty, particularly in the UK, has seen medium and longer yields rise with bond investors requiring an increasingly higher return against the perceived elevated risk of UK plc. Since the sell-off in April, equity markets have gained back the previous declines, with investors continuing to remain bullish in the face of ongoing uncertainty.

Over the period, the 10-year UK benchmark gilt yield started at 4.65% and ended at 4.70%. However, these six months saw significant volatility with the 10-year yield hitting a low of 4.45% and a high of 4.82%. It was a broadly similar picture for the 20-year gilt which started at 5.18% and ended at 5.39% with a low and high of 5.10% and 5.55% respectively. The Sterling Overnight Rate (SONIA) averaged 4.19% over the six months to 30th September.

Credit review: Arlingclose maintained its recommended maximum unsecured duration limit on most of the banks on its counterparty list at 6 months. The other banks, with higher risk factors, remain on 100 days.

After spiking in early April following the US trade tariff announcements, UK credit default swap (CDS) prices have since generally trended downwards and ended the period at levels broadly in line with those in the first quarter of the calendar year and throughout most of 2024.

Overall, at the end of the period CDS prices for all banks on Arlingclose's counterparty list remained within limits deemed satisfactory for maintaining credit advice at current durations.

Financial market volatility is expected to remain a feature, at least in the near term and, credit default swap levels will be monitored for signs of ongoing credit stress. As ever, the institutions and durations on the Council's counterparty list recommended by remain under constant review.
